Introduction - Vision Zero

Accidents at work and occupational illnesses are still underrecognized and under-reported - they always have causes. By building a strong prevention culture, these causes can be identified and work-related accidents and occupational diseases can be prevented. Vision Zero is a new strategy to approach prevention that integrates the three dimensions of safety, health and well-being at all levels of work. Safety and healthy working conditions are not only a legal and moral duty, but they also add up to organisational success - they are a key factor in competitiveness. International research on the role of interventions to prevent adverse events that are not well known or easily visible in safety and health generates a potential benefit of more than 6 euro in economic impacts. Safety and health conditions contribute to healthy businesses.

The Seven Golden Rules of the International Social Security Association’s (ISSA) campaign on Vision Zero are simple and can be adapted to the specific safety, health and well-being needs of any given country. By following these rules, Vision Zero benefits any workplace, enterprise, professional or organization in all regions of the world.

July 2019

The Conference is following the 15th International Conference held in May 2019 in Cyprus, as the Vision Zero campaign, the aim of the Conference is to emphasize the role of project leaders in Vision Zero and to present practical examples of the implementation of the Seven Golden Rules as an enabler of improvements in prevention through project planning and the promotion of the principles of prevention at occupational risk.

The Conference is a unique opportunity for professionals in the construction sector and related sectors, as well as for businesses, national and safety experts and consultancies. The participants will be informed through practical examples of the implementation of Vision Zero strategy and the Seven Golden Rules as well as effective methods, practices, successes and developments for safe execution of projects and their impact not only on prevention of accidents at work and occupational illnesses. Also, the participants will be able to participate actively in the Conference’s workshops and have the opportunity to experience an experience of Virtual Reality Training.
