Computational Vision and Medical Image Processing

Recent Trends

Springer
Preface

Nowadays, computational methodologies of signal processing and imaging analysis for 2D, 3D and even 4D data are commonly used for various applications in society. For example, Computational Vision systems are progressively used for surveillance tasks, traffic analysis, recognition process, inspection purposes, human-machine interfaces, 3D vision and deformation analysis.

One of the main characteristics of the Computational Vision domain is its inter-multidisciplinary nature. In fact, in this domain, methodologies of several other fundamental sciences, such as Informatics, Mathematics, Statistics, Psychology, Mechanics and Physics are regularly used. Besides this inter-multidisciplinary characteristic, one of the main rationale that promotes the continuous effort being made in this area of human knowledge is the number of applications in the medical area. For instance, statistical or physical procedures on medical images can be used in order to model the represented structures. This modelling can have different goals, for example: shape reconstruction, segmentation, registration, behavioural interpretation and simulation, motion and deformation analysis, virtual reality, computer-assisted therapy or tissue characterization.

The main objective of the ECCOMAS Thematic Conferences on Computational Vision and Medical Image Processing (VIPimage) is to promote a comprehensive forum for discussion on the recent advances in the related fields and try to identify areas of potential collaboration between researchers of different sciences.

This book contains the extended versions of nineteen papers selected from works presented at the second ECCOMAS thematic conference on Computational Vision and Medical Image processing (VIPimage 2009), which was held at the Engineering Faculty of the University of Porto, Portugal. It gathers together the state-of-the-art on the subject of Computational Vision and Medical Image processing contributing to the development of these knowledge areas and showing new trends in these fields.

The Editors would like to take this opportunity to thank to the European Community on Computational Methods in Applied Sciences, the Portuguese Association of Theoretical, Applied and Computational Mechanics, the University of Porto, all sponsors, all members of the International Scientific Committee and to all Invited Lecturers and Authors.

# Contents

Automatic Segmentation of the Optic Radiation Using DTI in Healthy Subjects and Patients with Glaucoma .............................. 1
Ahmed El-Rafei, Tobias Engelhorn, Simone Waernntges, Arnd Doerfler, Joachim Hornegger, and Georg Michelson

Real Time Colour Based Player Tracking in Indoor Sports ............... 17
Catarina B. Santiago, Armando Sousa, Luís Paulo Reis, and Maria Luísa Estriga

Visualization of the Dynamics of the Female Pelvic Floor Reflex and Steady State Function .................................................. 37
Christos E. Constantinou, Qiyu Peng, and Sadao Omata

Population Exposure and Impact Assessment: Benefits of Modeling Urban Land Use in Very High Spatial and Thematic Detail ............................................................... 75
Christoph Aubrecht, Mario Köstl, and Klaus Steinnocher

Dynamic Radiography Imaging as a Tool in the Design and Validation of a Novel Intelligent Amputee Socket ......................... 91
George Papaioannou, Dimitris Tsiokos, Goeran Fiedler, Christos Mitrogiannis, Ilya Avdeev, Jake Wood, and Ray McKinney

A Discrete Level Set Approach for Texture Analysis of Microscopic Liver Images .................................................................113
Daniela Iacoviello

Deformable and Functional Models .............................................. 125
Demetri Terzopoulos
Medical-GiD: From Medical Images to Simulations, 4D MRI Flow Analysis .................................................................145 Eduardo Soudah, Julien Pennecot, Jorge S. Pérez, Maurizio Bordone, and Eugenio Oñate

KM and KHM Clustering Techniques for Colour Image Quantisation .................................................................161 Mariusz Frackiewicz and Henryk Palus

Caries Detection in Panoramic Dental X-ray Images ..................175 João Oliveira and Hugo Proença

Noisy Medical Image Edge Detection Algorithm Based on a Morphological Gradient Using Uninorms .........................191 Manuel González-Hidalgo, Arnau Mir Torres, Daniel Ruiz Aguilera, and Joan Torrens Sastre

Leveraging Graphics Hardware for an Automatic Classification of Bone Tissue ..................................................209 Manuel Jesús Martín-Requena and Manuel Ujaldón

Model-Based Segmentation and Fusion of 3D Computed Tomography and 3D Ultrasound of the Eye for Radiotherapy Planning ..........................................................247 M. Bach Cuadra, S. Gorthi, F.I. Karahanoglu, B. Paquier, A. Pica, H.P. Do, A. Balmer, F. Munier, and J.-Ph. Thiran

Molecular Imaging of Hypoxia Using Genetic Biosensors .............281 Pablo Iglesias and J.A. Costoya

Two Approaches for Automatic Nuclei Cell Counting in Low Resolution Fluorescence Images .............................................311
Thierry Brouard and Aurélie Chantôme

Cerebral Aneurysms: A Patient-Specific and Image-Based Management Pipeline .........................................................327
