This edition of the proceedings is sponsored by the Calouste Gulbenkian Foundation and Junta Nacional de Investigação Científica e Tecnológica.

The texts of the various papers in this volume were set individually by typists under the supervision of each of the authors concerned.

Authorization to photocopy items for internal or personal use, or the internal or personal use of specific clients, is granted by A.A. Balkema, Rotterdam, provided that the base fee of US$1.50 per copy, plus US$0.10 per page is paid directly to Copyright Clearance Center, 222 Rosewood Drive, Danvers, MA 01923, USA. For those organizations that have been granted a photocopy license by CCC, a separate system of payment has been arranged. The fee code for users of the Transactional Reporting Service is: 90 5410 395 7/94 US$1.50 + US$0.10.

**Preface**

*Experimental Mechanics* is a very broad field which is highly interdisciplinary in its applications, and in its scientific and technological background, being of major concern in measurements, quality control, destructive and non-destructive testing of materials and components, and in fundamental research. It is related to such diverse disciplines as physical and mechanical sciences, engineering, materials, electronic and computer sciences, biological and theoretical sciences, such as statistics, etc.

In spite of the upsurge in numerical techniques for structural analysis, during the last two decades, the subject of *Experimental Mechanics* remains alive all over the world, assisting in the solution of many important physical and engineering problems of concern of society today. Furthermore, the recent developments on computer-based techniques as well as laser-based optical methods, among many other modern technological advances, have added a new dimension to the field of *Experimental Mechanics*.

Following the tradition of the last forty years, the '10th International Conference on Experimental Mechanics' has been organized on behalf of the European Permanent Committee for Experimental Mechanics, in Lisbon-Portugal, 18-22 July 1994. This International Conference takes place at four years intervals, with the main objective of bringing scientists and engineers together to discuss and to promote the exchange of their experiences in research and development activities in *Experimental Mechanics*.

Interest in the conference was such that over 300 papers were offered for inclusion in the programme, and it was to the great regret of the Organizing Committee that room could not be found for more than 240 of these.

The papers accepted for presentation at the conference, are arranged in these Proceedings according to nine important themes: (1) Hybrid techniques in stress analysis; (2) Optical techniques in experimental mechanics; (3) Automatic data acquisition and processing; (4) Transient phenomena and vibration analysis; (5) Residual stresses; (6) Measurement of stresses and strains in hostile environments; (7) Quality control and testing of materials and components; (8) Fracture mechanics and fatigue and (9) Biomechanics.

We should like to express our thanks to the authors for their contributions and to the many reviewers for their time, efforts and constructive criticism of the manuscripts. Furthermore, we wish to express our gratitude to the sponsoring organizations for their commitment and support to this international gathering.

In addition, and on behalf of all the participants it is our pleasure to record our gratitude to the staff of the Laboratório Nacional de Engenharia Civil, whose tireless efforts made the conference such a success.

The editors
Table of contents

5 Residual stresses

Automatic analysis of residual stresses in rails using grating interferometry
M. Kajaweńska, L. Salbut, A. Olszak & C. Forno

Electron beam moiré measurement of residual strains around Vickers impression
in a tungsten carbide composite
O.S. Lee & D.T. Read

Local stress analysis in ULSI by microscopic Raman spectroscopy and computer simulation
H. Sakata, N. Saito, N. Ishitsuka & H. Miura

Measurement of stress distribution during laser irradiation by using irreversible
stress-induced phase transformation in tetragonal zirconia
T. Miyake, E. Asao & C. O-oka

Elastic waves and non-destructive ultrasonic method of determination of two-axial stresses
A. N. Guz

Surface stresses measurement using ultrasonic techniques
D. Rojas González, A. Correia da Cruz, P. Barros & E. Dias Lopes

Depth profiles of residual stress in Zn-Ni alloy electro-plating with different thickness using
new method of X-ray stress analysis
T. Sasaki & Y. Hirose

Characterisation of mechanical properties and residual stresses in hardened materials
A.C. Batista, A.M. Dias, P. Virmoux, G. Inglebert, T. Hassine, J.C. Le Flur & J.L. Lebrun

Mechanical properties and residual stresses of WC-Co thermal-sprayed coatings
J. Pina, A. Dias, M.J. Marques, A. Gonçalves & J.L. Lebrun

Industrial optimisation of stress gradient determination by X-Ray diffraction and incremental
hole-drilling on Beryllium and Aluminium Alloy
C. Le Calvez, C. Cluzel, J.L. Lebrun & P. Harcout

New methods of X-ray tensometry
S.A. Ivanov, V.I. Monin & J.R. Teodosio

Metrological characterization of X-ray stress methods by means of cybernetics
D. Szczyl

6 Measurement of stresses and strains in hostile environments

Cure effect on composite material at elevated temperature

Investigations of pellet-clad mechanical interaction (PCMI) of two dimensional photelastic models
H.Y. Yang, J.F. Jullien & N.Waeckel

Methods for the investigation of composite materials thermal deformation by optical dilatometers
V.A. Borysenko, L.I.Gracevea & N.D. Pankratova

Mechanical structure subjected to cyclic thermomechanical loading
Interaction between ratcheting and creep
O. Philip & M. Cousin

Expertizing and monitoring of t/c structures in corrosive media
A. Catarg, I. Kopenetz & P. Alexa

Experimental study and numerical simulation of large ore mills
N. Constantin

Estimation of sulfide stress cracking resistance of low-alloy steels based on fracture mechanics approach
V.I. Astaffiev, S.V. Artamoshkin & T.V. Tetjueva
7 Quality control and testing of materials and components

Report of the activities on smart materials/structures research in Japan

Shrink fit stress analysis between a circular shaft and a shrunk ring
T. Sawa, K. Shimoizakura & T. Hamajima

An inverse analysis among finite strips
T. Sawa & K. Nakano

On the approximation of the fatigue stress diagrams
I. Goia & E. Carai

Adherence, friction and contact geometry of a rigid cylinder rolling on the flat and smooth surface of an elastic body (natural rubber) and influence of uniaxial prestrains
M. Barquins

Experimental stress analysis of normally intersecting pipes subjected to moments
N. Ferreira Rilo, J. F. Silva Gomes & J. M. O. Sousa Clirne

Construction of bending moment diagram of ferromagnetic beam-plate subjected to magnetic field using strain gages
S. M. Yap, C. R. Vilman, M. O. Peach & N. S. Christopherson

On the second order bending of the thin circular plates
M. Gh. Munteanu & Gh. N. Radu

Earth mechanical modelling taking into account its mass, participating in the vibration
G. P. Zafiu & C. Hereu-Bazutu

Numerical-experimental investigation of a pre-twisted bar under buckling load
E. Guglielmino, G. L. Rosa, S. M. Oliveri & X. X. Zhai

Full scale six degrees of freedom motion measurements of two colliding 80 m long inland waterway tankers
L. J. Wevers, J. F. Vugt & A. W. Vredenfeldt

Critical analysis of a steel tower experimental test
A. M. S. Bastos, J. Sampaio, F. M. Ede Oliveira & A. G. Magalhães

Cable forces measurements on the externally prestressed and cable-stayed structures
M. Pavisic

The ‘optimality degree’ of powered supports in coal mine stopes
E. R. Medves, M. Ionita, A. Petrescu & D. Fota

Full-scale testing of a GRP minesweeper hull to underwater explosions
R. A. Bourgois & B. Reymen

Experimental investigations of active acoustic detection method for LMFBR steam generator
H. Kamiagai, T. Sakuma & F. Yoshida

Applied research and development in the design of railway vehicles
A. L. Salgado Prata
Multiaxial fatigue testing machine under variable amplitude loading of bending and torsion
T.Palin-Luc & S.Lasserre

Proposal for a standardized experimental set-up to study multimaterial joints under dynamic loading – Application: Behavior of the windscreen during a car crash
D.Soulas, F.Collombet, J.L.Lataillade & A.Diboine

A study on the image processing measurement of behaviors near the fatigue crack tip
Y.Ochi, A.Ishii & H.Yoshida

Computation particularities for the elastic elements of strain gauge transducers
D.M.Stefanescu, A.Sandu & M.A. Sandu

Modern trends in mechanical testing of materials and components
E.Bauerfeind

Forming limit diagrams for modern Al and Al-Li alloys and MMCs
N.P.Andrianopoulos & S.K.Kourkoulos

Equations of the flow curve for a strain-induced dual phase metal and an analysis of the balancing condition in stress and strain of the coexisting two phases (Results on a SUS 304 foil under tension)
A.Takimoto

The electrical control of tribology characteristics
Y.Yamamoto, K.Iwai & S.Takahashi

Measurement of experimental factors influencing the constitutive equation of a high-strength steel
J.Toribio

Loading rate and temperature dependences on the flexural static behavior of unidirectional pitch based CFRP laminates
Y.Miyano, M.Nakada, N.Kitade, M.K.McMurray & M.Mohri

Some results on the nonlinear viscoelastic behavior of fiber reinforced composites
O.S.Briller, M.Katouzian & S.Vlase

Proposal for a standardized experimental device to study the behavior of laminates composites under low velocity impact loading
V.Martin, F.Collombet, M.Moura & J.L.Lataillade

On the mechanical behavior of the black cork agglomerate
M.I.Lopes Prates, J.A.Gil Saraiva & M.J.Moreira de Freitas

An original approach to stress analysis in thick foams
L.Neamtu

An experimental and theoretical investigation of the mechanical properties of a pre-tensioned unidirectional glass/epoxy composite
J.N.Ashton & A.S.Hadi

Reinforced shells made of hybrid epoxy composites
J.Travassos, R.Prina, A.Bismark, A.Silva, C.Soares & M.de Freitas
Setting up of biaxial membrane and bending tests in reinforced concrete panels
I. R. Pasca, J. F. Jullien & Y. L. Huby

Ductility effects in reinforced concrete beams and slabs
R. H. Scott

Tensile behavior of glass fibre reinforced concrete
J. A. O. Barros, J. A. Figueiras & C. V. D. Veen

FRC strengthened brick masonry walls horizontally loaded
R. S. Olivito, G. Spadea & P. Stumpo

A quality control test for composite masonry/concrete construction
S. W. Garrity

A model for laboratory consolidation of fissured clays
F. Federico

8 Fracture mechanics and fatigue

Ratcheting of stainless-steel/steel laminate pipe under cyclic axial-straining or cyclic bending combined with internal pressure
Y. Yoshida, T. Okada & T. Izumi

Testing and microstructural interpretation of 35CD4 steels in cumulative high cycle fatigue damage
M. Vivensang & A. Gannier

The inverse crack identification problem: Extension to two simultaneous cracks on free-free beams
J. M. Montalvão e Silva & A. J. M. Araújo Gomes

Development of an ultrasonic fatigue device and its application in fatigue behavior studies
J. Ni & C. Bathias

Localized strain behaviors around crack tip during load cycling and fatigue crack extension process
K. Hatanaka & T. Ishikawa

An experimental study of plastic zone adjustment by stress visualization techniques
K. Taniguchi

Repair of fatigue damage in pre-cracked specimen by laser surface treatment
J. Komotori, T. Nagashima & M. Shimizu

Relation between the scatter in growth rate of microcracks and small-crack growth law
M. Goto, H. Miyagawa, N. Kawagoishi & H. Nisitani

Using electrical resistance strain gages as fatigue damage sensors
J. L. F. Freire & C. A. C. Areás

Fatigue life assessment in notched specimens of 17Mn4 steel
J. D. M. Costa & J. A. M. Ferreira
Devices for mixed mode propagation: Application to A 42 FP steel
J. Royer & A. Le Van

Fracture mode transition in high cycle fatigue of high strength steel
Y. Kuroshima, M. Shimizu & K. Kawasaki

Experimental mechanics on initiation and growth of distributed small creep-fatigue cracks
R. Ohtani, T. Kitamura, N. Tuda & W. Zhou

Nanoscopic evaluation of corrosion damage by means of scanning tunneling and atomic force microscopes
K. Komai, K. Minoshima, M. Itoh & T. Miyawaki

Determination of the threshold for fatigue crack propagation using different experimental methods
K. Golos, R. Pippan & H. P. Stiwe

Evolution of the internal microdeformations during appearance and development of fatigue crack
C. Gheorghies & L. Palaghian

Experimental investigation of fatigue crack propagation in 7475-T761 aluminium alloy
C. P. M. Pereira, M. P. Peres & V. A. Pastukhov

Anisotropic fatigue crack propagation of Ti-6Al-4V alloy in 3% NaCl solution
M. Nakajima, K. Tokaji, T. Ogawa & T. Shimizu

Assessment of low-cycle fatigue strength of ductile cast iron on the basis of quantitative analysis of spheroidal graphite morphology and matrix structure
S. Harada, T. Ueda & M. Yano

Creep behaviors of notched and unnotched specimens under stress change
A. M. Abdel El-Mageed & G. Abouelmagd

Fatigue properties of Al-Si-Cu-Ni-Mg casting alloys at elevated temperatures
N. Hasagawa, T. Miyabe & T. Yamada

Influence of mean loading on fatigue crack growth velocity in 10HNAP steel under tension
G. Gasiak & J. Grzelak

Low cycle fatigue strength of Hi-Mn austenitic steel and its transformation properties
S. Nishida, N. Hattori, T. Shimada & S. Iwasaki

Ultrasound evaluation of material degradation due to hydrogen attack of 1/2-Mo steel
N. Ohtsuka & Y. Shinoda

Use of the Villari effect in fatigue of sintered steel
J. Kaleta & J. Zebrecki

Investigation of cadmium deposition effect on fatigue resistance of ABNT-4340 steel
M. P. Peres, C. P. M. Pereira & H. J. C. Voorwald

Effect of negative stress ratio on fatigue crack propagation in polymers
T. Shiraishi, H. Ogihara & H. Tsukuda
